

Ward 6: Non-fatal Opioid Overdoses

February 12, 2023

Stephen Ma

Maura Nakahata

- What is considered a non-fatal opioid overdose?
 - An opioid overdose is determined by an EMS provider’s clinical determination or by a provider who documents an improvement in the patient’s condition following naloxone administration.
- Potential data reporting issues:
 - Overdose victims who did not have a 9-1-1 call placed for them and therefore did not interact with EMS.
 - Overdoses without enough geographic information to determine in which Ward the incident occurred. As such, this data likely underrepresents total opioid overdoses in a particular Ward.
 - Overdoses that were ultimately fatal following transport to the emergency department.

Non-fatal Opioid Overdoses by Month in Ward 6, 2022-2024 YTD
