

Ward 7: Non-fatal Opioid Overdoses

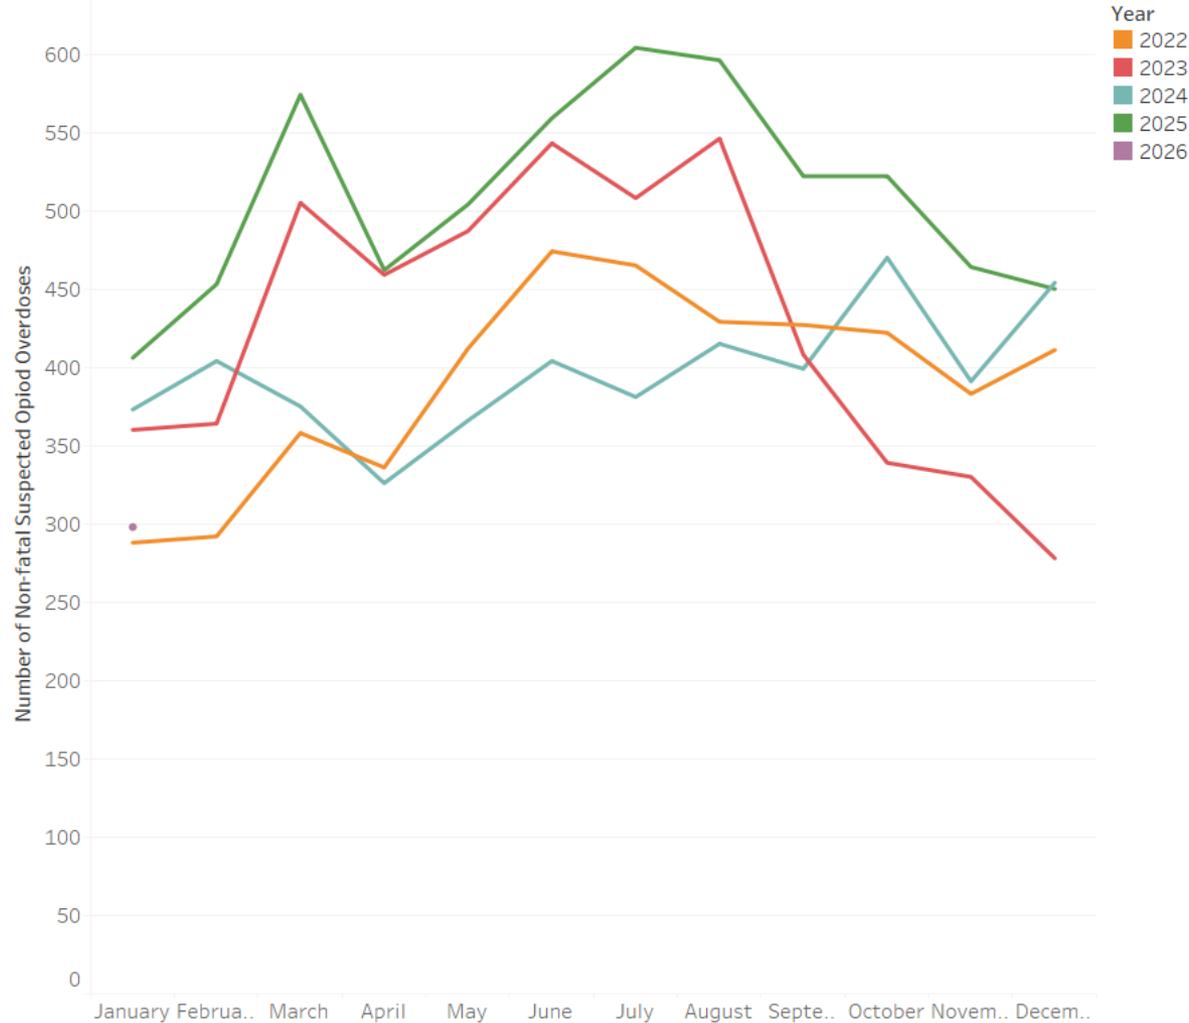

February 2026

Melanie Baylis | 2/5/2025

Maura Nakahata

- What is considered a non-fatal opioid overdose?
 - An opioid overdose is determined by an EMS provider’s clinical determination or improvement in the patient’s condition following naloxone administration.
- What is not included in these data
 - Overdose victims who did not have a 9-1-1 call placed for them and therefore did not interact with EMS.
 - Overdoses without enough geographic information to determine in which Ward the incident occurred. As such, the data likely underrepresents total opioid overdoses in a particular Ward.
 - Overdoses that were ultimately fatal following transport to the emergency department.

Non-fatal Opioid Overdoses by Month in District-Wide, 2022-2026 YTD

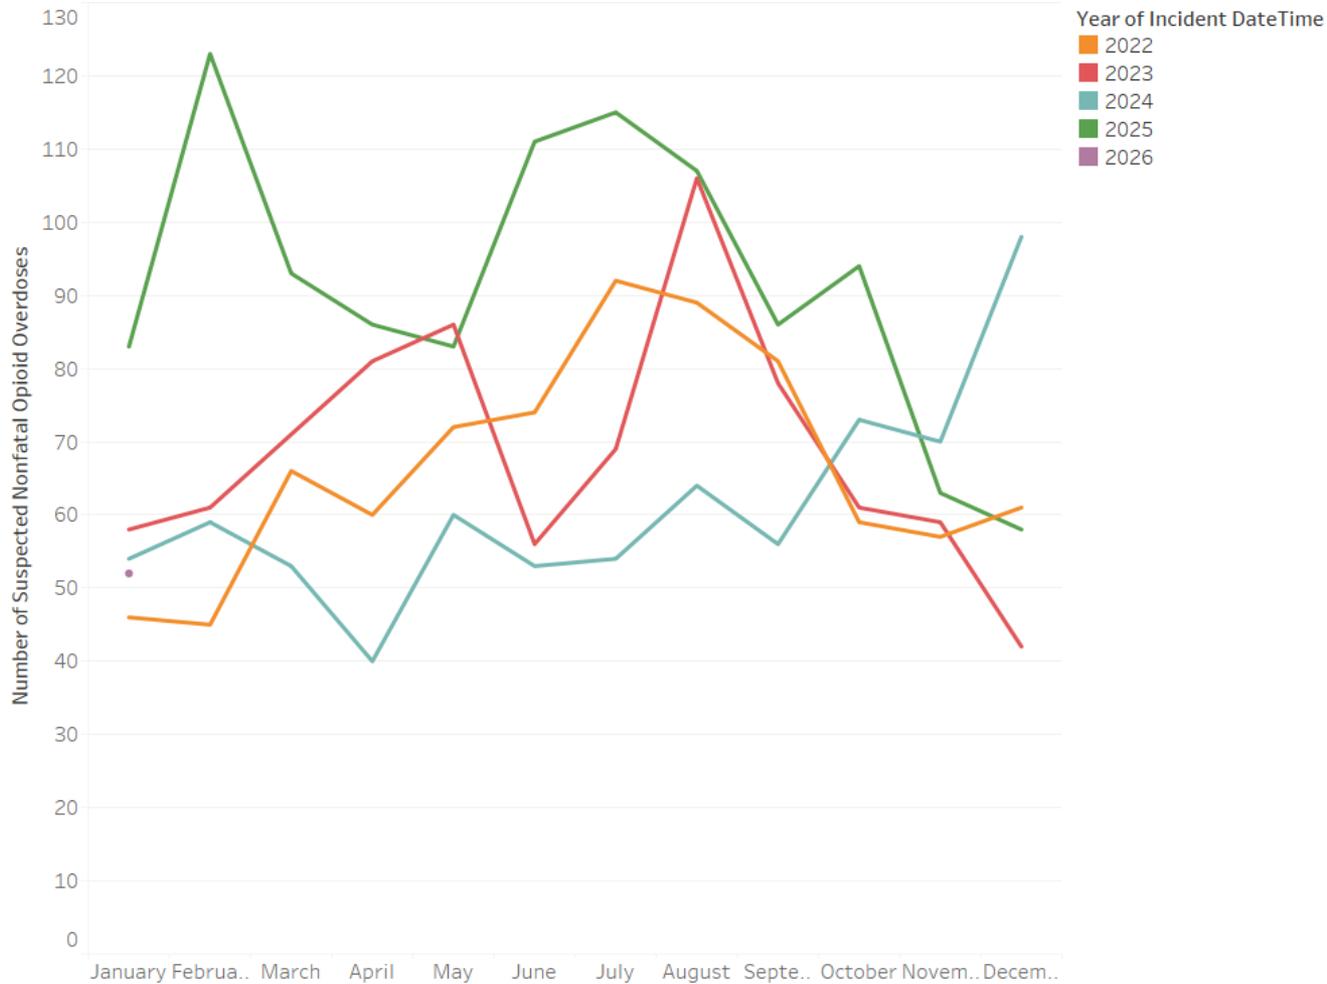

2025 Total:
6,116

28% increase
from 2024
